INTRODUCTION SECTION

Scenario and background
- I am a current resident of Paris, France and consider a hypothetical scenario to move in in Manhattan, NY. Although I am excited about it, I am concerned about the change that this implies, and I am mindful in keeping my same current. So, I need to find, in Manhattan, a comparable place where I can move in

Problem to be solved
- The challenge to resolve is being able to find a neighborhood in Manhattan NY that offers similar characteristics and benefits to my current situation

Interested audience
- This analysis might be of a good use (or at least inspiring) to each person or entity considering a similar move. The approach and methodologies used here are applicable in variety of cases. The use of FourSquare data and mapping techniques combined with data analysis will help resolve the key questions arisen.

DATA SECTION

Data of current situation	Data required to resolve the problem	Source of data and how it will be used	Mappinf of data

Data of current situation

- Currently reside in the 14th neighborhod of Paris France

- I use Foursquare to identify the venues around the area of residence which are then shown in the Paris map shown in methodology and execution in section 3.0 . It serves as a reference for comparison with the desired future location in Manhattan NY

Data required to resolve the problem

- In order to make a good choice of a similar apartment in Manhattan NY, the following data is required

- List/Information on neighborhoods form Manhattan with their Geodata(latitude and longitude)

- Venues and amenities in the Manhattan neighborhoods (e.g. top 10)

Source of data and how it will be used

- The list of Manhattan neighborhoods is worked out during LAB exercise during the course. A csv file was created which will be read in order to create a data frame and its mapping.

- Foursquare and geopy data to map top 10 venues for all Manhattan neighborhoods and clustered in groups (as per Course LAB)

Mappinf of data

- The following maps were created to facilitate the analysis and the choice of the palace to live

- Manhattan map of Neighborhoods

- Manhattan map of clustered venues and neighborhoods

METHODOLOGY SECTION

This section represents the main component of the report where the data is gathered, prepared for analysis. The tools described are used here and the Notebook cells indicates the execution of steps.
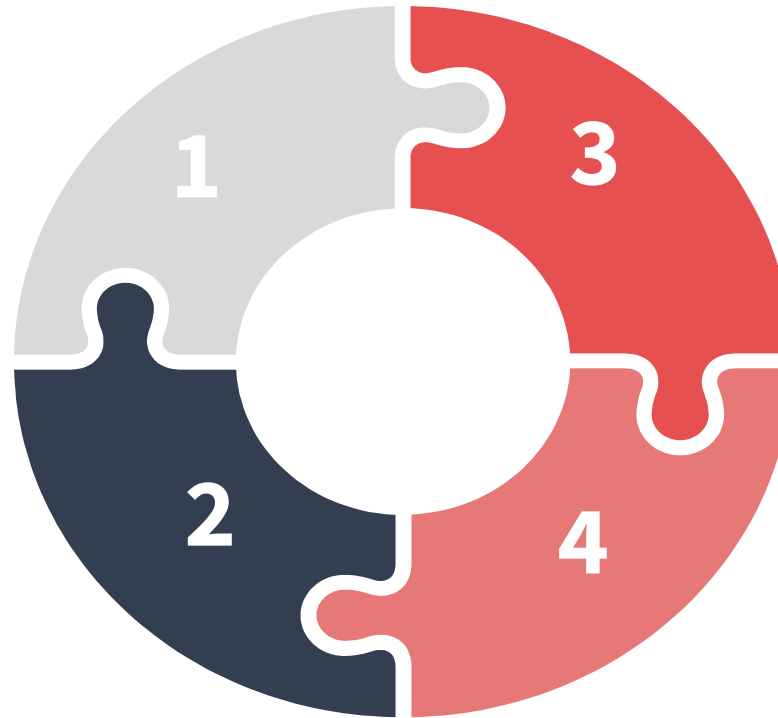

1 The analysis and the strategy

The strategy is based on mapping the above described data in section 2.0, in order to facilitate the choice of a candidate places for accommodation. The choice is made based on the demands imposed : similar venues to Paris. This visual approach and maps with popups labels allow quick identification of location, thus making the selection very easy

2 Data processing

The processing of these DATA and its mapping will allow to answer the key questions to make a decision:

3 Exploring current neighborhood
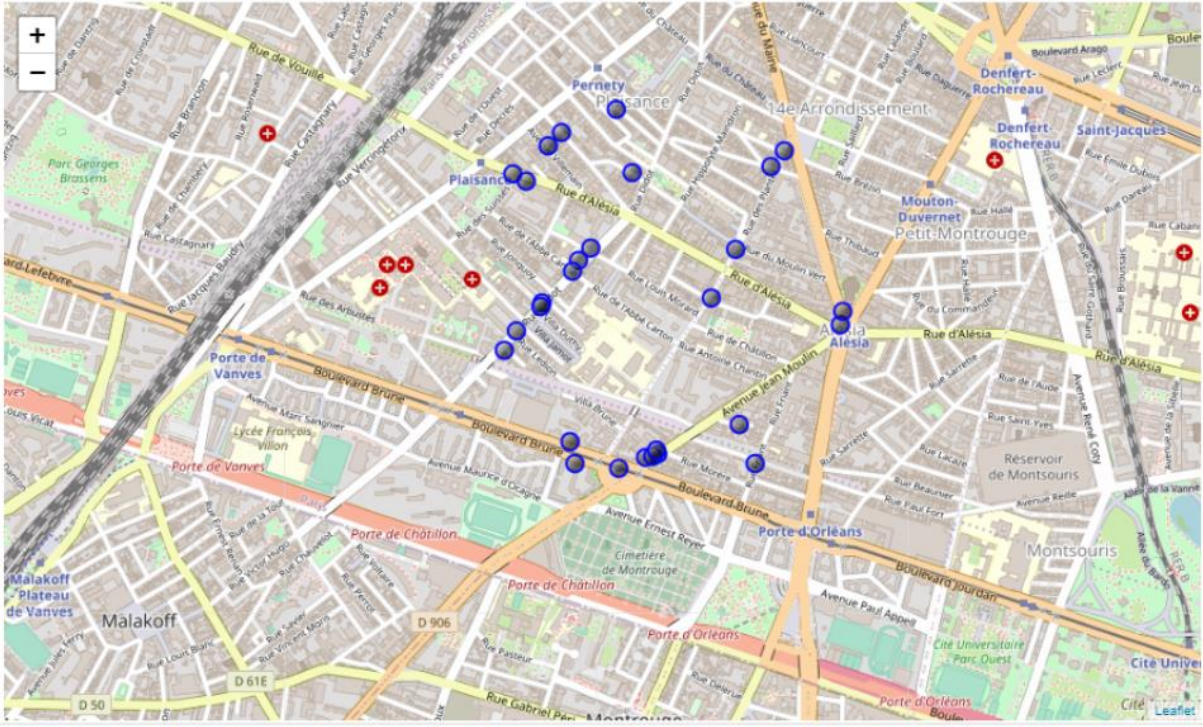

Finding the venues in my current Paris neighborhood

4 Exploring target neighborhood
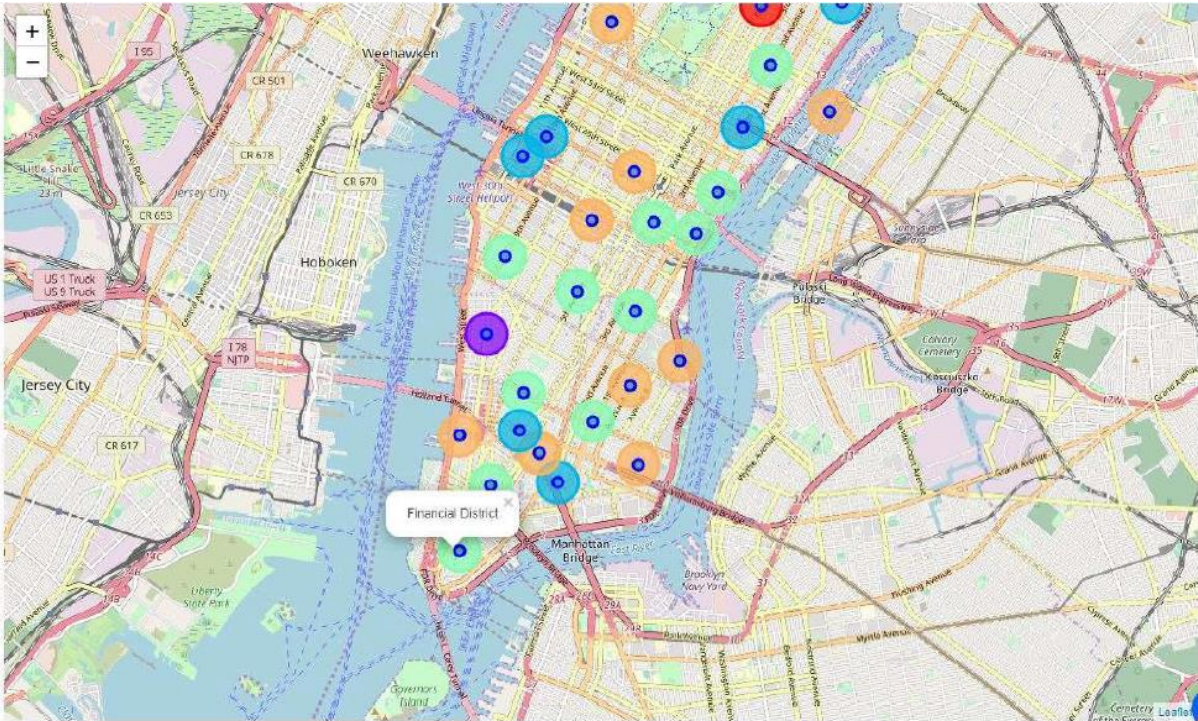

How venues distribute among Manhattan neighborhoods ?

RESULTS

CURRENT RESIDENCE IN PARIS

	name	categories	lat	lng
0	Les Petits Plats	French Restaurant	48.828652	2.322138
1	Le Jeroboam	Modern European Restaurant	48.829527	2.317492

29	Financial District	Coffee Shop	Hotel	Gym	Wine Shop	Steakhouse	Bar	Italian Restaurant	Pizza Place	Park
31	Noho	Italian Restaurant	French Restaurant	Cocktail Bar	Gift Shop	Bookstore	Grocery Store	Mexican Restaurant	Hotel	Sushi Restaurant

VENUE SELECTION

Venue Selection
- Using the "one map" above, I was able to explore all possibilities since the popups provide the information needed for a good decision.
- Financial District having Gyms, Hotels and Restaurants similar to
  Paris residence is my preferable choice for a future
  residence.

Based on current Paris venue, I feel that Cluster 3 type of venues is a closer resemblance to my current place.
That means that Financial District is a better choice since it offers comparable convenience as what I have in my current neighborhood.
